IPN STUDENTS WILL PERFORM SOCIAL SERVICE AT SIEMENS

Enrique Soto

The Instituto Politécnico Nacional and Siemens Industry Software, a transnational company of German origin signed a Collaboration Agreement through which the student community of the various academic units of the IPN will contribute their talent to this Company through social service.

"The country's leading institution in science and technology has contributed to strengthening the economic and industrial sectors nationally and globally, thanks to the excellent training received by its graduates," said IPN Director General Arturo Reyes Sandoval.

He said that the IPN has a community of 216,000 students and has 20 Centros de Estudios Científicos y Tecnológicos (CECyT), 32 higher-level academic units, and 20 research centers spread throughout most of the country.

"In the southeast is our newest unit that teaches railway engineering and, of course, students will be able to work alongside the Tren Maya in real situations," he said.

The head of Politécnico said that the university is certain that the Siemens experience will increase the employability and educational level of young polytechnic students.

"I am sure that you will be able to count on the best scientific and technical talent that exists in Mexico and that has been strengthened during the 87 years that the institution has been in existence," he concluded.

At the time, the vice president and general manager for Mexico and Central America of Siemens, Alejandro Canela, said that his company is aware of the transformation that both

parties generate together. "Let's be humble, no one can do it alone, we need to unite: academia, government and industry to form an ecosystem," he said.

With the formalization of this alliance between the IPN and Siemens, the bases and mechanisms will be established to take full advantage of the human, material and financial resources of both parties.

Siemens - with 176 years of history and named after its founders Werner von Siemens and Johann Georg Halske - operates in four sectors: industrial, energy, health and infrastructure, with efficient and resilient plants that operate with cutting-edge technology.

According to the company, two billion people in the world use, directly or indirectly, some of the products and solutions of this technology company.
